Cyber Forensic Services - UK NACE

(UK National Authority for Counter-Eavesdropping)

The increasing sophistication of cyber attacks can put even the most protected security operations under threat. The highly-trained and globally experienced professionals at UK NACE provide the highest standards of forensic investigation and analysis against compromised networks and end user IT devices

UK NATIONAL AUTHORITY
FOR COUNTER-EAVESDROPPING

Cyber Forensic Services - UK NACE

(UK National Authority for Counter-Eavesdropping)

Features

By reviewing and analysing potentially compromised assets, UK NACE is able to provide bespoke cyber forensic services, including:

- Forensic triage and analysis on desktop, laptop, servers and mobile devices – specialised professionals using forensically sound techniques to assess whether your device has been compromised. Outcomes can be admitted as evidence to support investigations.
- Criminal and misconduct analysis and investigation – specifically trained personnel supporting law enforcement, using techniques to find evidence of criminal behaviour and misconduct.
- Advanced malware identification, containment and analysis - monitor, reverse and eliminate malware.
- Network and wireless traffic capture and analysis – passively capture your network and wireless traffic to identify attack, exploitation and risks.
- Vulnerability testing – supporting best practice by identifying weaknesses and planning solutions.
- User awareness training – tailored training to avoid targeted threats, to change behaviour and culture.
- Cyber device baseline and comparison – baselining of hardware and software before deployment and analysis of any changes upon return.

- Best practice consultations – balancing expenditure with the requirement for security and asset protection.
- Data recovery – capability to rebuild and recover deleted and lost data.
- Technical security counter measures of cyber endpoints – comprehensive endpoint analysis for the operational environments.
- Physical and X-ray inspection of digital devices – to identify changes and modifications.
- Fully mobile – flexible team which can be deployed remotely.

All our services benefit from UK NACE's established professional relationships for information exchange and collaboration with key stakeholders across UK and foreign friendly governments.

About UK NACE and FCO Services

UK NACE has more than 65 years of experience in detecting and protecting against technical espionage attacks. Practising its trade in the most hostile environments across the world, UK NACE operates at the forefront of technology and works alongside other global leaders in electronic counter-espionage. Its research and development into security solutions to counter technical eavesdropping attacks is also helping to ensure information remains secure and protected globally.

UK NACE is managed by FCO Services, which is part of the Foreign and Commonwealth Office and provides secure services to UK Embassies and Consulates in 152 countries. FCO Services have experience in dealing with the highest levels of security threats and have a deep understanding of security matters. We anticipate future challenges and develop solutions to help our customers.

Our staff are DV security cleared, highly trained and professionally qualified with a huge wealth of experience. We have local knowledge on a global scale, adapting our solutions to fit the local environment and working in partnership with customers to deliver the solutions they need.
