# Protect against technical espionage and prevent your information and premises from compromise, with the assurance that comes from using the world-leading UK NACE

The increasing sophistication of physical, electronic and cyber attacks can put even the most protected security operations under threat. The highly-trained and globally experienced professionals at UK NACE provide the highest standards of security protection against the threats of physical penetration and technical espionage.

Through staff education, technical security inspections, cyber forensic investigations, advice on security weaknesses and recommendations for appropriate protection - our team of security cleared experts help you manage the risk of hostile attack and provide assurance that your assets are protected.

### Your service from FCO Services

Our staff are security cleared and we are highly respected in the public sector and internationally as a trusted supplier for work to the highest security standards. Our long history and experience means we have an unrivalled understanding of your unique requirements and through risk-based evaluation and recommendations we will ensure an appropriate level of protection for you, avoiding unnecessary over-engineering of technical solutions and ensuring value for money.

We work with you to deliver our service in a manner and at a time that suits your needs with minimal disruption to your business.

### Features

UK NACE can tailor a bespoke service for your requirements, based on the risk to your assets. Our services include:

- Technical security inspections – also known as sweeps, provided on a one-off or ongoing basis
- Technical security construction supervision – to ensure counter-eavesdropping protection during new building works
- TEMPEST testing - to ensure energy from IT or other equipment is not interpreted by eavesdroppers
- Security vulnerability assessment – accompanied by advice on how to improve protection

- Security awareness education – to improve staff knowledge against threats and how to counter them
- Technical surveillance counter measures training – using best practice techniques and specialist detection skills
- Radio countermeasures – including spectrum monitoring and radio frequency testing to detect any threats or vulnerabilities
- Secure speech and acoustic testing – to ensure your secure areas remain uncompromised
- Technical integrity assurance of high security environments – including reviewing access control, intrusion detection and other physical security systems
- WiFi consultancy, testing and monitoring – preventing unauthorised or inappropriate use
- Cyber forensics and end-point security – to ensure the integrity of computers and other devices

### About UK NACE and FCO Services

UK NACE has more than 65 years of experience in detecting and protecting against technical espionage attacks. Practising its trade in the most hostile environments across the world. UK NACE operates at the forefront of technology and works alongside other global leaders in electronic counter-espionage. Its research and development into security solutions to counter technical eavesdropping attacks is also helping to ensure information remains secure and protected globally.

UK NACE is managed by FCO Services, which is part of the Foreign and Commonwealth Office and provides secure services to its overseas network of 267 posts in 152 countries.

FCO Services have experience in dealing with the highest levels of security threats and have a deep understanding of security matters. We anticipate future challenges and develop solutions to help our customers.

Our staff are vetted, highly trained and professionally qualified with a huge wealth of experience. We have local knowledge on a global scale, adapting our solutions to fit the local environment and working in partnership with customers to deliver the solutions they need.
